

SURABHI RAJBHANDARI

surabhirajbhandari567@gmail.com | 267-592-0404 | My portfolio: surabhirajbhandari.github.io

EDUCATION

Drexel University

Bachelor of Science in Computer Engineering, Minor in Data Science, GPA: 3.5

Philadelphia, PA

Graduated: June 2025

SKILLS

- **Programming Languages:** Python, SQL, C/ C++, MATLAB, R, CSS/ HTML, React, JavaScript
- **Data & Analytics:** Snowflake, Power BI, Tableau, Excel, MicroStrategy, Apache Spark, Databricks, PostgreSQL
- **AI/ML:** Scikit-learn, XGBoost, TensorFlow, PyTorch, Reinforcement Learning, LLM APIs, Prompt Engineering
- **Cloud & Tools:** AWS, Azure, GitHub, Jira, Confluence, Asana, Slack, Google Colab, Figma, Canva, Microsoft 365
- **Product Skills:** Requirements Gathering, User stories & acceptance criteria, Backlog Prioritization, KPI Definition, Stakeholder Management, Agile Methodologies, User Acceptance Testing, Process Documentation & workflow mapping

WORK EXPERIENCE

Data Analyst, Wawa Inc

April 2024 - September 2024

- Built scalable SQL-based ELT pipelines in Snowflake to automate data reconciliation and validation for 3M+ pricing records across SAP, POS, and eComm systems, improving downstream data reliability for legacy system migration
- Developed KPI dashboards in MicroStrategy to monitor sales and customer behavior across 900+ stores, delivering hourly insights and benchmark comparisons to support pricing and promotional decisions
- Conducted market analysis using multivariate regression and hypothesis testing in R to model regional price elasticity, providing foundational insights for the development of Wawa's Localized Geographic Price Zones strategy

R&D Developer, Ipipeline

April 2023 - September 2023

- Developed and validated a KNN-based machine learning classifier to extract data fields from insurance forms with 90% accuracy, reducing manual processing time and improving onboarding efficiency for iPipeline's iGo users
- Designed interactive Power BI dashboards leveraging DAX and Power Query to track software delivery quality KPIs across 15+ SaaS products, enabling early risk detection and contributing to a 20% improvement in release timelines
- Automated the ingestion of Jira SDLC data into Power BI using JQL and REST APIs, modeling it in a star schema to enable weighted Quality Index scoring across delivery, defect, and production metrics

Business Systems Architect, Cencora

April 2022 - August 2022

- Led the requirements analysis for an Azure-based Warehouse Management Portal, collaborating with business stakeholders to translate high-level business vision into technical specifications and user workflows
- Managed the product backlog in an Agile environment, authoring and prioritizing 100+ user stories with acceptance criteria for core features including authentication, role-based access, and core warehouse workflows
- Developed and executed test cases in Azure DevOps and validated RESTful APIs in Postman to ensure reliable CRUD operations, error handling, and backend data synchronization

PROJECTS

Reconfigurable Intelligent Surface (RIS) - Capstone Project, Drexel University

September 2024 – June 2025

- Led AI strategy and development for an NSF-funded RIS project, translating complex wireless communication challenges into AI workflows and evaluation metrics, for optimizing 6G network performance
- Developed Reinforcement Learning models (Deep Q-learning and Multi-Armed Bandit) to dynamically optimize RIS state configuration, achieving 95% accuracy in maximizing signal power across 1000+ receiver locations
- Built scalable Python ETL pipelines processing 2M+ wireless simulation data points into structured datasets, integrating it into a machine learning environment with domain-specific rewards for AI model training

Focura, DragonHacks 2025 – Best AI Implementation Winner

May 2025

- Developed an AI-powered productivity and wellness app that detects slouching and phone distraction, delivering real-time nudges to help users stay upright, focused, and on task during study or work sessions
- Implemented the underlying workflow using MediaPipe for posture tracking, LangGraph for logic orchestration, and Gemini API for intelligent feedback, validating system behavior across multiple user scenarios

LEADERSHIP INVOLVEMENT

Study Abroad Scholarships Ambassador, Drexel Global

September 2024 – Present

- Led 40+ info sessions, advised students, and promoted global engagement through study abroad opportunities

Hackathon Coordinator, Institute of Electrical and Electronics Engineers

September 2021 – April 2024

- Organized Drexel's annual hackathon, with 300+ participants, directing the marketing, logistics, and event committees

Teaching Assistant, Drexel University

September 2021 – December 2021

- Facilitated weekly labs and mentored 60 students in hands-on engineering projects in design and data analysis
