EDUCATION

Drexel University

Bachelor of Science in Computer Engineering, Minor in Data Science, **GPA: 3.5**

Philadelphia, PA

Graduated: June 2025

SKILLS

- **Programming Languages:** Python, SQL, C, C++, MATLAB, R, CSS/ HTML, JavaScript
- **Data & Cloud:** Power BI, MicroStrategy, Tableau, Excel, Snowflake, AWS, Azure, Apache Spark, Databricks, PostgreSQL
- **AI/ML:** Scikit-learn, XGBoost, TensorFlow, PyTorch, Reinforcement Learning, LLM APIs, Prompt Engineering
- **Tools:** GitHub, Jira, Confluence, Asana, Slack, Trello, Google Colab, Figma, Canva, Microsoft 365
- **Product Skills:** Product Strategy, User Research & Testing, User Stories, Prioritization, KPI Definition, A/B Testing, Requirements Gathering, Agile Methodologies, Stakeholder Management

WORK EXPERIENCE

Data Analyst, Wawa Inc

April 2024 - September 2024

- Built scalable ELT pipelines in Snowflake with SQL to automate data reconciliation and validation workflows for 3M+ pricing and sales records across SAP, POS, and eComm systems, accelerating legacy data migration by 40%
- Developed KPI dashboards in MicroStrategy supporting self-service analytics and real-time tracking of sales trends and consumer behavior across 900+ stores, enhancing executive decision-making on pricing and promotions
- Conducted market analysis using multivariate regression and hypothesis testing in R to model regional price elasticity, providing foundational insights for the development of Wawa's Localized Geographic Price Zones strategy

R&D Developer, Ipipeline

April 2023 - September 2023

- Developed a KNN – based ML classifier that automated extraction of 20+ data fields from insurance forms with 90% accuracy, reducing manual processing time and improving user experience for for iPipeline's iGo platform
- Built interactive Power BI dashboards leveraging DAX, Power Query, and advanced data modeling to track software delivery quality KPIs across 15+ SaaS products, enabling early risk identification and improving project delivery by 30%
- Automated the ingestion and transformation of SDLC data via Jira REST APIs into a structured data model, enabling real-time quality scoring and defect tracking system across the organization

Business Systems Architect, Cencora

April 2022 - August 2022

- Spearheaded the requirement analysis for a new Azure based Warehouse Management Portal by collaborating with business stakeholders to translate high-level business vision into technical specifications and user workflows
- Managed the product backlog in an Agile environment, authoring and prioritizing 100+ user stories with clear acceptance criteria for core features including authentication, role-based access, and operational workflows
- Developed comprehensive test cases in Azure DevOps and validated RESTful APIs in Postman to ensure reliable CRUD operations, error handling, and backend data synchronization, documenting and resolving defects

PROJECTS

Reconfigurable Intelligent Surface (RIS) - Capstone Project, Drexel University

September 2024 – June 2025

- Led AI development for an NSF-funded RIS project, collaborating cross-functionally to translate complex wireless communication challenges into testable AI workflows and evaluation metrics, for optimizing 6G network performance
- Developed Reinforcement Learning algorithms (Deep Q-learning and Multi-Armed Bandit) to dynamically optimize RIS state configuration, achieving 95% accuracy in maximizing signal power across 1000+ receiver locations
- Built and automated scalable Python ETL pipelines processing 2M+ wireless simulation data points into structured datasets, integrating it into real-ML environment with domain-specific rewards for AI model training

Focura, DragonHacks 2025 – Best AI Implementation Winner

May 2025

- Developed an AI-powered productivity and wellness app that detects slouching and phone distraction and delivers real-time nudges to help users stay upright, focused, and on task during study or work sessions
- Built the underlying workflow using MediaPipe for posture tracking, LangGraph for logic orchestration, and Gemini API for intelligent feedback, integrating Pomodoro timers and hydration reminders to support healthier work habits

LEADERSHIP INVOLVEMENT

Study Abroad Scholarships Ambassador, Drexel Global

September 2024 – Present

- Promoted study abroad opportunities by organizing and leading info-sessions to enhance global engagement

Hackathon Co-ordinator, Institute of Electrical and Electronics Engineer

September 2021 – April 2024

- Organized Drexel's annual hackathon, with over 300 participants, directing the marketing and event committees

Teaching Assistant, Drexel University

September 2021 – December 2021

- Facilitated weekly labs and mentored 60 students in hands-on engineering projects in design and data analysis
